Summary

Data Analyst and MERN Full Stack Developer — CSE Undergraduate (**CGPA: 8.16**). Skilled in data analysis and building interactive dashboards using **Power BI, Advanced Excel, and MySQL**. Proficient in Python-based analysis with **Pandas, NumPy, and Seaborn**. Experienced in scalable web applications using **React and MERN Stack**.

Education

Madhav Institute of Technology and Science, Gwalior

2023 – 2026

B.Tech - Computer Science and Engineering (CGPA: 8.4)

Gwalior, MP

Govt. Model Higher Secondary School

2021 – 2022

Class XII (PCM) (84.5%)

Mhow (Indore), MP

Govt. Model Higher Secondary School

2019 – 2020

Class X (97.3%)

Mhow (Indore), MP

Technical Skills

Languages: Python, C, C++, JavaScript, SQL

Frameworks / Libraries: React, MERN Stack, HTML5, CSS3, Tailwind, Bootstrap, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, FastAPI

ML / AI: Machine Learning, Linear Regression, Logistic Regression, Naive Bayes, TF-IDF, Cosine Similarity, NLP, TensorFlow

Tools: Power BI, MySQL, Figma, VS Code, PyCharm, IntelliJ, Canva

Projects

Complaint Setu | React, Node.js, Express, MongoDB, Python, FastAPI, Scikit-learn, TensorFlow

2025

github.com/patelyash47597-wq/Complaints_etu

- Built a full-stack citizen grievance portal with JWT-secured REST APIs, role-based admin access, and complaint lifecycle management for Water, Electricity, Roads, and Sanitation.
- Engineered multi-modal ML priority prediction – Naive Bayes text classification (TF-IDF, unigrams + bigrams) combined with TensorFlow EfficientNet image classifier; fuses text and image confidence scores to auto-assign High/Medium/Low priority.
- Implemented real-time duplicate detection using cosine similarity on TF-IDF vectors with location-aware fuzzy matching (threshold ≥ 0.55) and SLA enforcement (High: 24h, Medium: 48h, Low: 72h).
- Built admin dashboard with Chart.js analytics, automated Nodemailer email notifications, and secured backend with Helmet, CORS whitelisting, bcrypt, and tiered rate limiting.

AI-Powered Career Development Platform | React, TypeScript, Recharts, jsPDF, Firebase

2025

github.com/patelyash47597-wq/serach_job

- Built live job search with real-time listings, advanced filters, and REST API integration; designed node-based learning roadmaps with YouTube IFrame API (node completes after 90%+ watched).
- Implemented 20-question quiz engine with 75% pass threshold, automated PDF certificate generation (jsPDF), and analytics dashboard with Recharts for quiz scores and learning trends.
- Integrated AI-powered chatbot for personalized career guidance and resume scanning; built user profile system with Firebase authentication and multi-roadmap progress persistence.

Mental Health Platform | React, TypeScript, Firebase

2025

github.com/patelyash47597-wq/Yash_Mental

- Built an AI-powered mental health chatbot that guides users through their concerns via context-aware conversation flows and provides personalized mental wellness recommendations.
- Implemented a quiz-based psychological assessment engine that classifies users into Mild, Moderate, or Severe categories based on responses, enabling tailored intervention pathways.
- Designed tiered support system – Mild: music therapy, yoga sessions, thought detox, bin diary; Moderate: peer-to-peer support with similar-experience student connections; Severe: direct counsellor support and professional referral.
- Built modular React and TypeScript UI components with Firebase authentication, real-time database integration, and accessible responsive layouts.

Truth Lens – Fake News Detector | React, Python, Scikit-learn, Naive Bayes

2026

github.com/patelyash47597-wq/Fake-news-Detection

- Trained a Naive Bayes classifier on a balanced dataset of 10,000 articles (5K real, 5K fake) using TF-IDF vectorization for fake news detection.
- Built an interactive React dashboard displaying real-time prediction results with confidence score, live accuracy tracking, classification split (donut chart), and recent predictions history.
- Integrated FastAPI backend exposing a `/predict` endpoint that returns label (Real/Fake) and confidence percentage per article submitted.

Mobile Sales Data Analytics | Python, Pandas, NumPy, MySQL, Power BI *[Demo Video]*

2026

- Performed data cleaning with Pandas and NumPy; analyzed sales trends and regional insights in MySQL; built interactive Power BI dashboard visualizing revenue KPIs, top products, and monthly trends.

Certifications

Frontend Developer – Infosys Springboard | Data Virtualization – Infosys | Python for Data Science – IBM | HTML, CSS, JavaScript – Infosys
